

## IT'S TIME TO UPGRADE TO ODSEE!

Version 5.2 of Sun Directory Server has reached the end of its service life, which means Oracle no longer provides new features or fixes. For continued support and enhanced system visibility, now's the time to upgrade to Oracle Directory Server Enterprise Edition (ODSEE). With Hub City Media's Directory Migration Services, you can make the transition quickly and with minimal disruption.

### WHY ODSEE?

Transitioning to ODSEE for directory services makes sense for 5.2 users. ODSEE maintains the Sun Directory Server code base, protecting your investment while assuring you continued support from Oracle. ODSEE also offers an improved directory services console, provides more visibility into data replication and latency issues and improves read and write access performance vs. Sun DSEE 5.2.

### ACCELERATE YOUR MIGRATION.

Our Directory Migration Service encompasses all versions of Sun Directory Server Enterprise Edition, SunONE Directory Server and iPlanet Directory Server products. We upgrade a single Sun Directory Server platform running in development, test and production, covering up to three Sun Directory servers and up to two Sun Directory Proxy servers.

We start by duplicating the existing directory server architecture, leveraging components from the Oracle Directory Services Suite. We then:

- Configure new Oracle Directory Server Enterprise Edition servers with custom schema elements, caching parameters and relevant tuning parameters to match the existing production environment
- Configure SSL security
- Install and configure the Directory Service Control Center
- Configure replication, proxy or meta-directory functionality to match the production environment
- Upload directory data from snapshots of the production data taken prior to the upgrade and configure replication agreements
- Validate and test the upgraded environment
- Advise you on redirecting queries and breaking replication agreements between old and new environments.

### BENEFITS OF HUB CITY'S DIRECTORY MIGRATION SERVICE

- Provides a faster, smoother, more stable migration based on our proven migration methodology
- Leverages components of the Oracle Directory Services Suite to protect your investment and minimize disruption
- Ensures you expert guidance and engineering from a technology team with elite Directory Server credentials
- Encompasses all versions of Sun Directory Server Enterprise Edition, SunONE Directory Server and iPlanet Directory Server products to meet your needs

### COUNT ON HUB CITY MEDIA.

If your systems depend on LDAP directory services provided by SUN DSEE, contact HCM to help preserve the stability of your systems and technology investment. We can also evaluate your existing directory service and suggest the best migration path to a new infrastructure based on Oracle Directory Services products. Our Directory Migration Service and expertise in building large, scalable directories are the right combination for a smooth transition.
